Referral Management	Yes	Yes	Yes	Yes
Training Program, Technical Support	Each new sleep center account gets a practice management trainer for scheduling, automated patient check-in, automation of all sleep center forms, documents, sleep studies and letters, posting of charges, electronic billing, patient statements, electronic posting of insurance payments, accounts receivable management, etc.	We "train the trainers" as clients, both on-site and via WebEx. We also provide WebEx sessions for groups of client personnel. Refresher training for new staff and training on new modules are also provided via WebEx. Multiple levels of technical support offered: basic support comes at no added cost and is provided via a dedicated team that responds to email-generated tickets. All Indigo Arc support personnel are US-based.	Written guides for key tasks. Train the trainer in the clinic is our philosophy.	Every Praxis EMR client is assigned a personal implementation manager from our support department to assist with training and implementation.
Sleep Medicine Templates	Personal Sleep Study, Epworth Sleep Study, Restless Legs Syndrome, Multiple Sleep Latency Test, Multiple Wake Test, Polysomnogram, Polysomnogram Diagnostic, Overnight, Split Night PSG with Two Night PSG	Client forms, questionnaires, etc are implemented as part of the setup. This includes medical history forms, sleep questionnaires, pre-sleep questionnaires, post-sleep questionnaires, patient satisfaction forms, etc. Custom templates for online interpretations are implemented to cover all sleep study types a client performs. These are customizable, down to the preferences of individual physicians.	Polysomnogram, Titration, Split Night Study, Home Sleep Study, Multiple Sleep Latency Test, Supply Reorder, Compliance Follow-up	Users build customized templates.
Other Sleep Medicine-specific Features	A sleep center operates differently than a traditional medical office in most cases. Because of this, a sleep center facility owner encouraged us to spend extra software development time and money on the unique needs. IMS for Sleep Medicine EMR solution includes a full array of modules that save sleep centers time and money.	Scoring QA, patient and staff scheduling, referral management, marketing and business metrics, unlimited reports, equipment associated with each bed (pediatric ready, enhance oxygen, etc), compliance monitoring via patient portal, DME module, customizable workflow, task alerts for employees and managers	Mobile-friendly interface. Integrates with Sandman/ALICE sleep analysis software, but does not replace those analytic tools.	Because it is template-free, Praxis users can build their own customized sleep medicine knowledge base in their own words.
